Interventions for supporting the initiation and continuation of breastfeeding among women who are overweight or obese.
Fair FJ. Cochrane Database of Systematic Reviews 2019;9:CD012099.
[Evidence suggests that mothers who are overweight or obese are less likely to initiate breastfeeding and to breastfeed for a shorter duration. Considering the rising prevalence of overweight and obesity globally and the known benefits of breastfeeding particularly in reducing the long-term risks of obesity and diabetes for infants, establishing effective ways to support and promote breastfeeding in women who are overweight or obese is paramount in achieving the goal of healthier communities.]

Intravitreal ranibizumab versus laser photocoagulation for retinopathy of prematurity: efficacy, anatomical outcomes and safety.
[The purpose of this study was to compare the efficacy, anatomical outcomes and complications of intravitreal ranibizumab with those of laser photocoagulation for retinopathy of prematurity (ROP).]

Nasal High-Flow Therapy for Newborn Infants in Special Care Nurseries
[Nasal high-flow therapy was not shown to be noninferior to CPAP and resulted in a significantly higher incidence of treatment failure than CPAP when used in nontertiary special care nurseries as early respiratory support for newborn infants with respiratory distress.]
